

Coffee Drip Brewing Manual

This simple manual will guide you through the process of brewing coffee using a pour-over or coffee drip method. Enjoy a great cup of coffee!

What You'll Need

Here is a list of the equipment and ingredients required for a successful brew:

- **Coffee Brewer:** A pour-over device (e.g., V60, Chemex, cone brewer)
- **Coffee Filter:** Paper or cloth filter that fits your brewer
- **Coffee Grinder:** A burr grinder is recommended for an even grind
- **Kettle:** A gooseneck kettle offers the best control for pouring
- **Fresh Coffee Beans:** Choose your favorite roast
- **Water:** Freshly boiled, filtered water (ideally between 195°F and 205°F)
- **Mug or Server**
- **Scale (Optional but recommended):** For precise measurements

Step-by-Step Instructions

Follow these steps for a perfect cup:

1. Preparation

First, measure and grind your coffee. A good starting ratio is 1 part coffee to 15 or 16 parts water (e.g., 20 grams of coffee for 300-320 ml of water).

Item	Measurement
Coffee Grind	Medium-Fine (similar to table salt)
Coffee	
Water	

2. Rinse the Filter

Place the filter in the coffee brewer. Use hot water to fully saturate the filter and the brewer. This removes any papery taste and preheats your equipment. Pour out the rinse water from your mug or server before brewing.

3. Add Coffee Grounds

Add your freshly ground coffee to the rinsed filter. Gently shake the brewer to level the coffee bed.

4. The Bloom (First Pour)

1. Start your timer.
2. Pour just enough hot water (about twice the weight of the coffee grounds) over the coffee to fully saturate all the grounds.
3. Wait for 30 seconds. This step is called the "bloom" and allows the coffee to release gases, which improves the flavor extraction.

5. The Main Pour

Continue pouring the remaining water slowly and steadily in a circular motion, moving from the center outward and back in. Avoid pouring directly onto the filter paper walls.

- **Timing:** Aim to complete the entire pour process (including the bloom) between 2:30 and 3:30 minutes.

6. Finish and Enjoy

Once all the water has dripped through, remove the brewer and filter. Pour the coffee into your mug and enjoy your freshly brewed drip coffee!
